

**Ron Aharoni, a professor of mathematics at the Israel Institute of Technology, accepted his friend's invitation to teach mathematics in elementary school. Since then he has devoted much of his time to primary mathematics education. Aharoni played a major role in the successful fight against "fuzzy math" in his country, and in the implementation of a competent, no-frills curriculum. In this book, he shares with the reader -- a parent, or a teacher -- the insights he gained concerning elementary mathematics and mathematical education. His next book is about Mathematics, Poetry, and Beauty.**
